## INTRODUCTION :

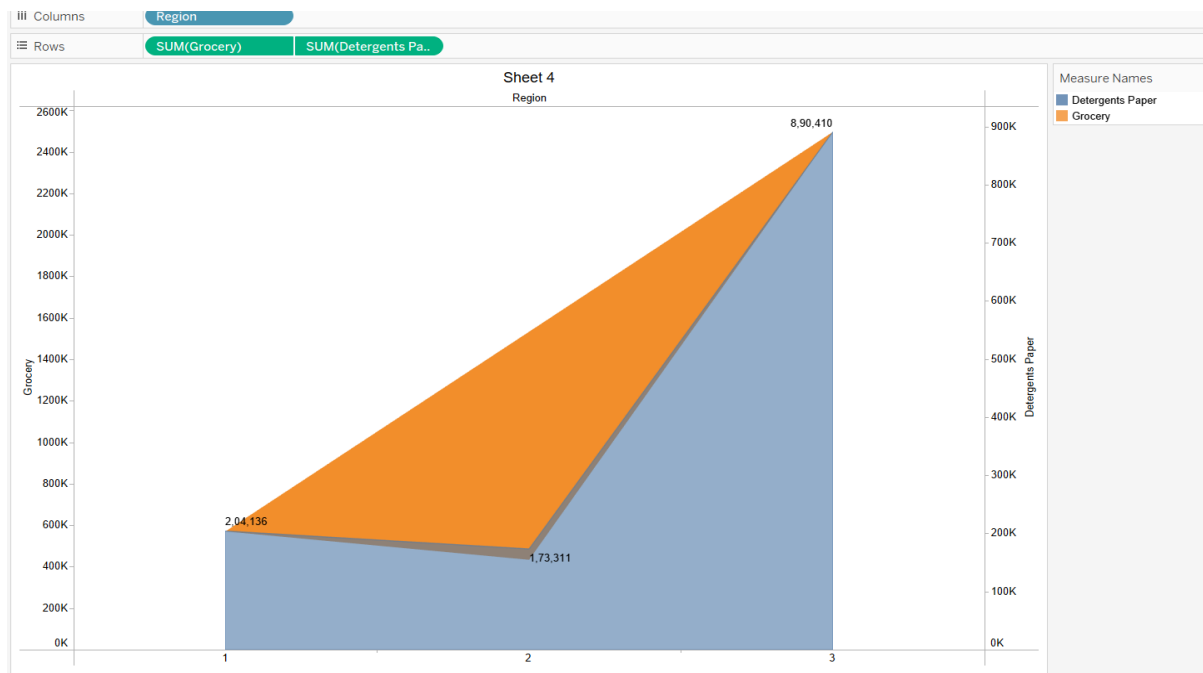

## OUTLINE:

Gather relevant data on this project. This can include information of the products. Various sources like milk, detergent paper, fresh, frozen and grocery. It must be useful for business.

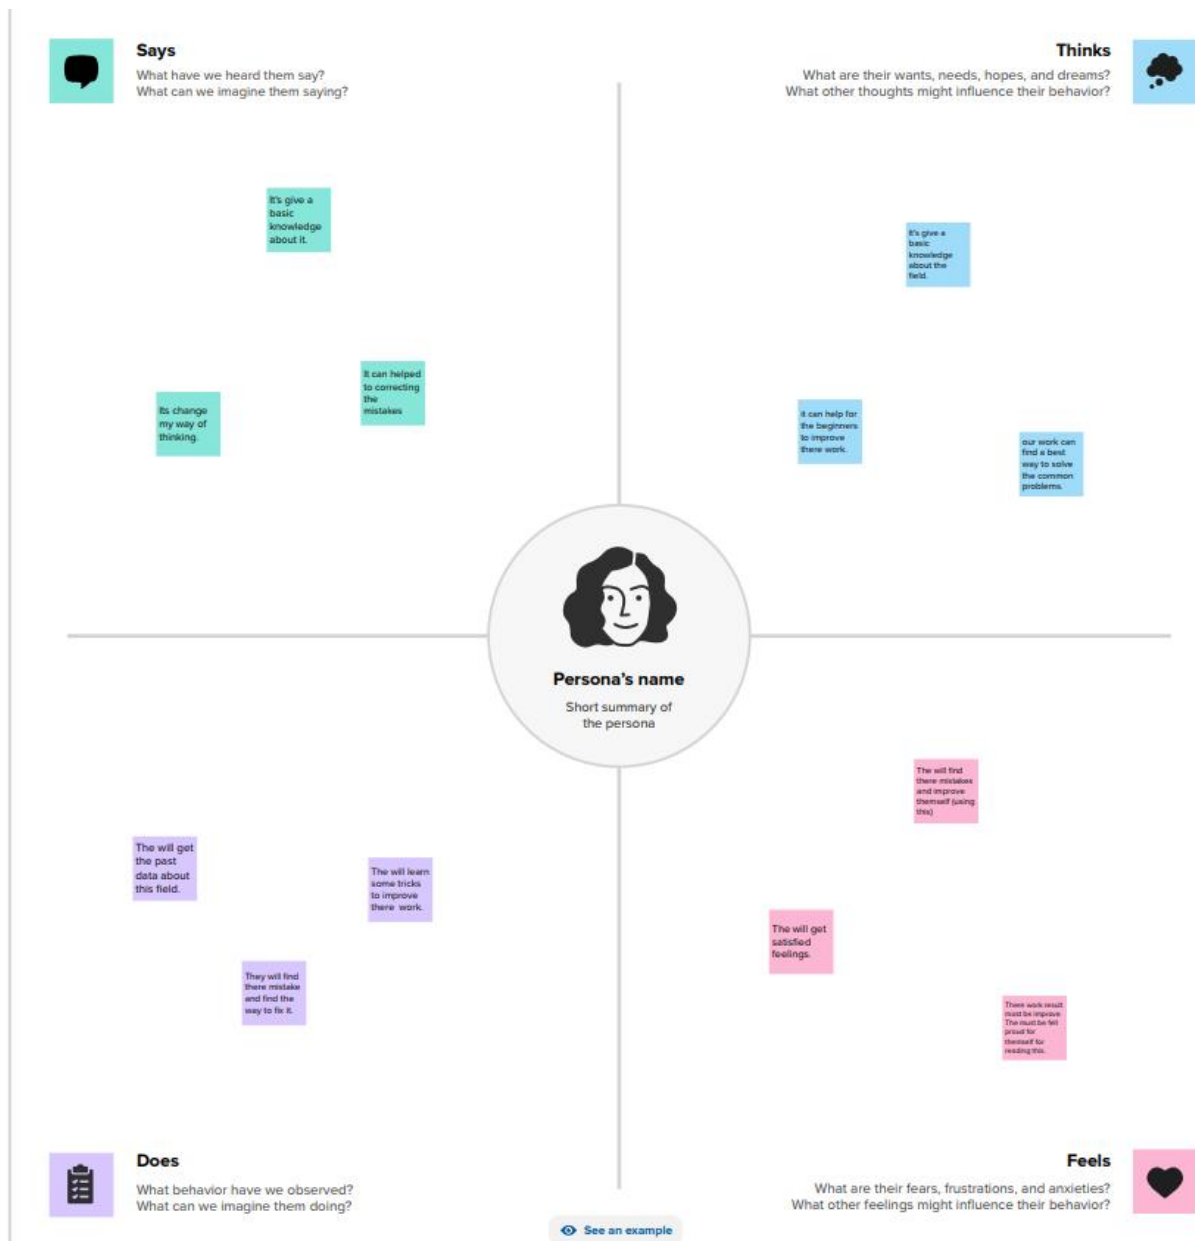

**We collected the data and analyse it. We found out the relation and difference between the product. We make a graph charts. We show to the reader proper details. We make it easy to understand even a 10 year kid can be able to understand it. We take products like milk, detergent paper, fresh, frozen and grocery. it must be helpful to the beginners.**

**We even mentioned the numbers of the product. So anyone can easily find out the original perfect value. like this ,**

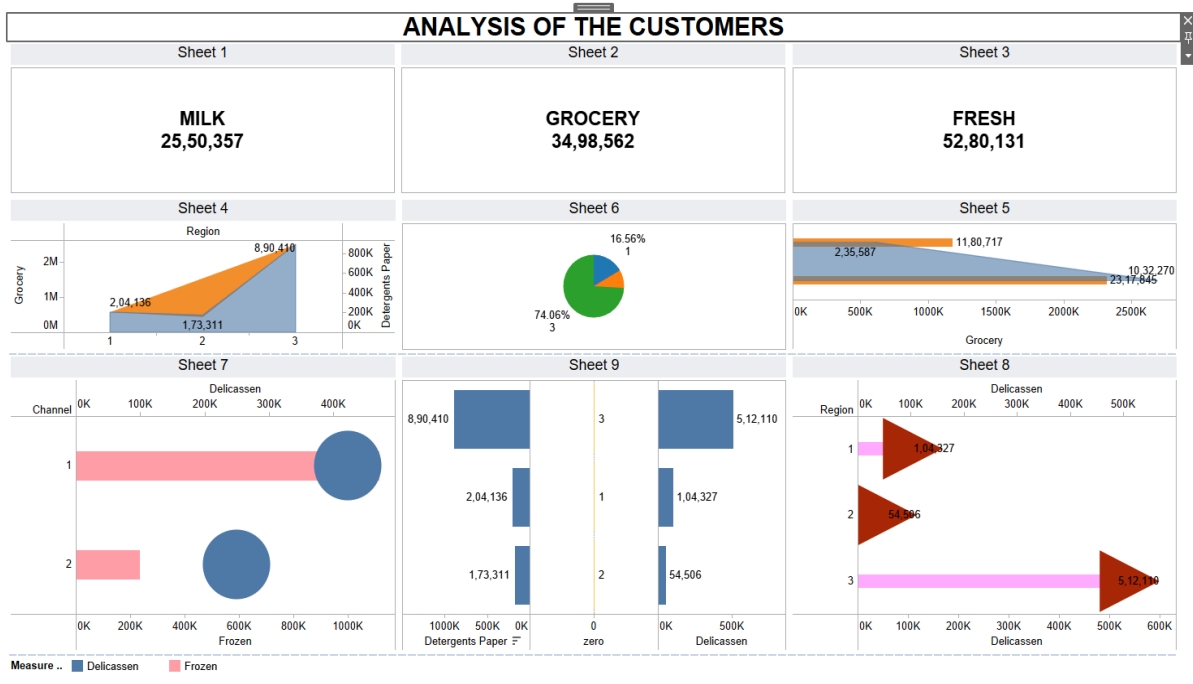

See the above picture chart. You can see every details given there is so accurate and very easy to understand. We even differentiate the product by its colour. Our data can change a business. Our idea is just makes a mirror in this field. The owner can easily find out the needs and desires. They can easily find out their prospects for the success.

**Problem definition & design thinking:**

## RESULT:

## ADVANTAGES AND DISADVANTAGES :

1. Easy to find the products value
2. Easy to find needs of the costemer
3. Easy way to collcuate the income
4. Easy to make a data about the products
5. It may help ful for the future planings
6. It's make bussness easy so so many opponents can arrive.
7. It's does not give peoples fellings about the products.

## APPLICATIONS:

It can sutable for any meterialistic products businness.

We ever want we can change it for our needs.

## **COUNCLUSION :**

EVERY LOCK HAS IT'S OWN KEY

**DREAM BIG**

## **FUTURE SCOP:**

In future we can use this formula in to the students. So we can easily find out the quality state.
